U.S. DEPARTMENT OF ENERGY'S

CONQUER THE HILL

REIGN EDITION

PART OF THE CYBERFORCE® PROGRAM

Overview

Welcome to the 2025 Reign competition! Prepare to experience a cybersecurity competition like no other, as this year's competition has a hint of déjà vu and transpires within a 2D dungeon crawler platformer game. First, you will have to put back together a nuclear reactor to light your way. Then hack through server rooms, interact with AI robots, decrypt secret messages, and navigate your way throughout several levels to fulfill your quest. However, not everything is as it seems, and you must use your wits and cunning to progress through rooms of increasing difficulty to ultimately unravel the truth. Participants should expect to be tested on their knowledge of cybersecurity, computer science, mathematics, cryptography, and critical thinking skills in general. Is everything as it seems OR are you in a simulation…?

Student Benefits

- Targeted training on cybersecurity skill sets that employers are seeking
- Introduction to firsthand examples of new technologies
- Access to information about other cyber training and efforts
- Mentorship from industry and national lab staff
